SUMMARY

Full-stack developer (C#, SQL, JS, TS) experienced in building production applications with .NET and ASP.NET Core: layered architecture, ORMs, SQL/NoSQL databases, unit and integration testing, and third-party integrations with SOAP and REST APIs. Also have hands-on experience with authentication, concurrency handling, caching, and Docker. Focused on building clean, scalable, and maintainable systems. Deeply invested in AI-assisted development, using Claude Code with MCP-based automation and custom tooling for daily workflows.

WORK EXPERIENCE

RemSoft.Dev - ASP.NET + SQL Developer (outstaff)

Nov 2025 - now

Fundraising and donation platform.

- Built end-to-end DAFpay integration: HMAC-verified idempotent webhooks, Postman integration tests
- Developed PayPal transaction-fee reconciliation pipeline over NVP and REST APIs, backed by EF6 and a stored-procedure-centric SQL Server layer (T-SQL)
- Designed provider-agnostic email infrastructure with fallback chains as internal REST API, unit-tested with xUnit and Moq
- Shipped platform-wide donation checkout rollout across Stripe and other payment providers, rebuilt centralized input validation, and delivered production fixes driven by log analysis
- Drove legacy minimization and upgrade of a WebForms monolith (.NET Framework 4.5 to 4.8) with unified unit testing
- Initiated Claude Code adoption, guiding the team on secure MCP setup (Jira, SQL Server, git), and engineered a multi-repo knowledge system with cached codebase maps, staleness detection, Python-linted schemas, and custom skills

MeetPoint - Full-stack Developer

Dec 2024 - Aug 2025

Noncommercial team project - web application for organizing meetups by calculating optimal locations for multiple users.

- Architected a monolithic web application from the ground up
- Designed and maintained PostgreSQL database schemas with EF Core, implemented JWT-based authorization (ASP.NET Identity), Redis caching, and SignalR sessions
- Integrated Google Maps Platform SDK and documented REST APIs with Swagger
- Set up project infrastructure and contributed to establishing team coding standards

PROJECTS

ETL CLI tool

Oct 2025

CLI tool for preprocessing and bulk-importing large CSV datasets into SQL Server.

- Implemented streamed, type-agnostic CSV import to handle large files efficiently
- Designed data preprocessing pipeline for dataset cleaning and transformation with memory-optimized bulk inserts
- Developed MSSQL database schema with computed columns and performance-focused indexes

SKILLS

- **Languages:** C#, SQL (T-SQL), JavaScript, TypeScript - OOP, OOD, SOLID
- **Backend:** ASP.NET Core and .NET Framework 4.x - Web API, MVC, Web Forms, Worker Services, SignalR, xUnit, Moq
- **Databases:** SQL Server, Entity Framework (Core and EF6), PostgreSQL, MySQL, Redis
- **Integrations:** REST, SOAP, webhook-driven payment flows (Stripe, PayPal, DAFpay), email (Mailgun, SMTP)
- **Frontend:** Angular (v20), AngularJS, jQuery, Razor, HTML, CSS/SCSS, RxJS
- **AI tooling:** Claude Code, MCP servers, agent workflow automation, custom skills and caching
- **Infrastructure:** AWS (ECS, Lambda, S3, KMS), Docker, Cloudflare, Bitbucket Pipelines, Git, basics of RabbitMQ, Azure

EDUCATION

Bachelor of Software Engineering, Faculty of Applied Mathematics

2021 - 2025

National Technical University of Ukraine "Igor Sikorsky Kyiv Polytechnic Institute"

LANGUAGES

- **English** - Advanced
- **Ukrainian** - Native speaker
